

Thermometers

TX1001.02.03

Simplicity Allows for Ease of Use

TX10 Series of Digital Thermometers

TX10 Series offers thermocouple thermometers that support K, J, E and T type thermocouples. There are three models available: 1-channel single-function, 1-channel multi-function, and 2-channel multi-function models.

TX1001

1-channel Single-function Model (TX1001)

TC TYPE

Operation

Select the thermocouple type (K, J, E, and T) for the initial setting.
(The type K is factory-set at shipment)

Press and hold down the TC TYPE key while pressing the POWER key.

The TX10 enters the thermocouple type selection mode, and each press of the TC TYPE key switches between the thermocouple types.

Then accept the setting with the POWER key.
(Make sure that the characters in the display have changed.)

DATA HOLD

Press this key to hold the measured value.

Multi-function Models (TX1002/03)

Memory-in Function

Up to ten data items can be stored. When recalled, the stored data value is displayed with its memory number.

User calibration function

Calibration and adjustment can be made easily by operating the panel keys on instrument and a measurement-standard.

TX1002
TX1003

TC TYPE

Thermocouple type (K, J, E, and T) select key

(Operation is the same as TX1001)

CH

(TX1003 only)

Input channel select key

With each press, the channel switches through the sequence of "chA," "chB," and then "chA-chB."

DATA HOLD

Data hold key

A held measured value, can be stored in the memory of an optional memory number, which is selected with the ▲, ▼ keys.

RECORD

Maximum and minimum record key

Stores the maximum and minimum values from the time the RECORD key is pressed.

Data record key

Stores the held measured value in memory. (Up to ten)

RANGE

Resolution select key

With each press, resolution alternates between 0.1°C and 1°C.
(Within the range of -200.0°C to 199.9°C)

READ

Maximum and minimum values, and stored data read key

Every time this key is pressed, the maximum and minimum values, stored data, and the current measured data are displayed in sequence.

REL/ADJ

Relative display select key

Displays measured values with reference to the value obtained immediately before this key was pressed (relative value). Each press of this key can select or release the relative display.

Simplified correction mode key

Sets the correction value, and selects active/inactive of the simplified correction function.

▲, ▼ Data call-up key

Used to select a memory number when calling up stored data. Also used to adjust the correction value for simplified correction mode.

(Shown above is the TX1003. The TX1002 has no CH key.)

Can Be Used in Wide Variety of Applications

●Temperature management in a refrigerated warehouse

●Frozen food products quality control

●Perishable foods quality control

●Temperature management in production processes

●Product temperature measurement test

●Temperature checks in equipment maintenance
●Temperature management for research and development

NOTE: 90030B is using polyimide to insulate from objects to be measured.
Manufacturers of polyimide are announcing not to apply polyimide directly for food, internal and body fluid.

Optional Accessories for TX10

Product name	Model
Temperature probe (for type K)	90020B/21B/22B/23B/24B/30B/31B/32B/33B
Bead TC (for type K)	245907
K-shape connector	99009
Extension cable (5 m)	245921
Extension cable (10 m)	245922
Soft case	93012

NOTE: Please purchase commercially available thermocouples (Type-E/J/T), connectors and extension cables.
