

WeLockStation

Description

Gets access privileges to the measuring station. If this API function is issued to a station that is already being accessed by another PC, an error (209) occurs.

Syntax

`WeLockStation (ByVal hSt As Long) As Integer`

Return value

Returns 0 if successful. Returns an error code if unsuccessful.

Parameters

`hSt (IN)` Station handle

Example (Visual Basic)

```
Dim hSt As Long
Dim ret As Integer
' Get the station handle of the station named "Station 1."
ret = WeOpenStation ("Station 1", hSt)
' Turn ON Station 1.
ret = WePower(hSt, WE_ON)
' Get access privileges to the station named "Station 1."
ret = WeLockStation(hSt)
```

WeUnLockStation

Description

Frees access to the specified station. If this API function is issued to a station that is already being accessed by another PC, an error (209) occurs.

Syntax

`WeUnlockStation (ByVal hSt As Long) As Integer`

Return value

Returns 0 if successful. Returns an error code if unsuccessful.

Parameters

`hSt (IN)` Station handle

Example (Visual Basic)

```
Dim hSt As Long
Dim ret As Integer
' Get the station handle of the station named "Station 1."
ret = WeOpenStation ("Station 1", hSt)
' Turn ON Station 1.
ret = WePower(hSt, WE_ON)
' Get access privileges to the station named "Station 1."
ret = WeLockStation(hSt)
.....
' Frees access to the station named "Station 1."
ret = WeUnLockStation(hSt)
```

WelsLockedStation

Description

Queries the access privileges availability of the station (whether or not the station is being accessed).

Syntax

[WelsLockedStation](#) ([ByVal hSt As Long](#), [ByRef sw As Byte](#)) As Integer

Return value

Returns 0 if successful. Returns an error code if unsuccessful.

Parameters

hSt (<i>IN</i>)	Station handle
sw (<i>OUT</i>)	Access privileges availability. Returns 0 if it is available. Returns 1 if access authority is not available.

Example (Visual Basic)

```
Dim hSt As Long
Dim ret As Integer
Dim sw As Byte
' Get the station handle of the station named "Station 1."
ret = WeOpenStation ("Station 1", hSt)
' Turn ON Station 1.
ret = WePower(hSt, WE_ON)
' Get access privileges to the station named "Station 1."
ret = WeLockStation(hSt)
' Queries the access privileges availability of the station named
' "Station 1."
ret = WeIsLockedStation(hSt, sw)
```
